

HSE policy statement

The long-term business success of VSE depends on our ability to continually improve the quality of our products and services while optimizing the health, safety, and state of wellbeing of our people. VSE conducts an active HSE policy to actively strive for ensuring occupational health & safety and environmental protection.

Our HSE management system is a management system that helps put our HSE policy into action and establishes everyday opportunities addressing risks inherent in our business, including environmental and safety risks. In this process workers will be consulted and asked for participation, also workers representatives will be taking part in the management systems. VSE is aware of the impact of its activities and will review our HSE policy annually and revise where needed. The challenge we take is to responsibly manage and reduce this impact by:

- Complying with the ISO 14001 and ISO 45001 standards, the law and other relevant regulations and certifications
- Assess the environmental impact of all historical, current and future operation
- Manufacture safely and sustainably according to the latest technologies and standards
- Set HSE performance objectives, measure results, assess and continually improve the OH&S and EMS management systems
- Minimize our impact on the environment by pollution prevention, reduction of natural resource consumption and emissions, and the reduction and recycling of waste
- Communicate openly with stakeholders and improve the performance on issues relevant to our them
- Ensure all employees know the safety regulations and are competent to conduct their tasks
- Providing equipment for personal and environmental protection
- Conduction of regular audits and inspections
- Taking precautions for working with dangerous substances
- Reporting and registering (near) accidents and unsafe situations and identify if corrective or preventive measures are needed
- Eliminate hazards and reduce OH&S and EMS management system risks
